

SPEND MORE TIME IN MOTION

KOHLER Flex technology offers manufacturers and end users a complete and versatile engine platform, featuring maximum efficiency, compactness, power and torque delivery; simplified installation; lower operating costs; and ease of maintenance. In addition, our cost competitiveness and superior performance are key advantages that are appreciated in every geographical area.

THE ULTIMATE SOLUTION TO GLOBAL EMISSIONS

Our Stage V development has followed our simple, straightforward philosophy: deliver more value to our customers and end users. We have developed a solution that is functional and compact so that OEMs are not required to re-engineer their machines. It offers end users a DPF technology that eliminates machine downtime thanks to our smart regeneration strategy, clean combustion, reduced fuel consumption and oil cleanliness.

KOHLER Flex

KOHLER'S INTEGRATED SUITE OF ENGINE SYSTEMS

KOHLER Flex is the range of solutions for emission control that Kohler has designed to enable each configuration of the KDI platform to comply with all emissions standards and regulations, worldwide. At the heart of KOHLER Flex there is the clean combustion of KDI engines that enables the adoption of a compact, state-of-the-art DPF to meet the Stage V emission standard.

KOHLER Flex combines the clean in-cylinder combustion of KDI engines, made possible by high-pressure common rail (2000bar), 4 valves head, turbocharger and cooled-EGR, and the ultra-compact aftertreatment devices (DOC, DPF and SCR) to comply with all emission requirements.

SMART AND COMPACT EMISSIONS MANAGEMENT SYSTEMS

Exhaust Gas Recirculation (EGR)

emissions.

Diesel Oxidation Catalyst (DOC)

particulate matter.

Diesel Particulate Filter (DPF)

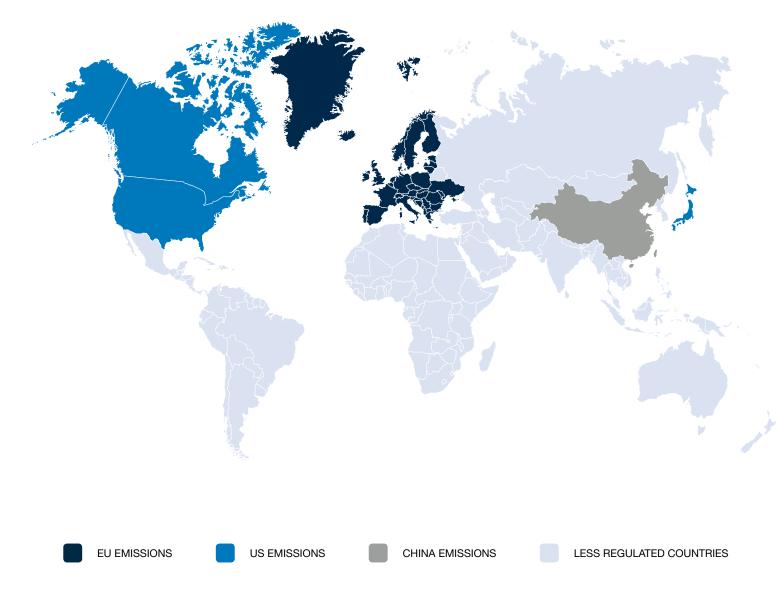

The EGR system recirculates the exhaust gas The DPF is a soot trap, which physically captures diesel back into the air intake, reducing nitrogen oxide particulate matter and prevents their release into the

Selective Catalyst Reduction (SCR)

The DOC reacts with exhaust gases to reduce
The SCR System sets off a chemical reaction that converts carbon monoxide, hydrocarbons, and some nitrous oxide into nitrogen, water and tiny amounts of carbon

BE UNSTOPPABLE

At Kohler, we created a new platform of diesel engines, designed to meet the requirements of a global market that demands more application flexibility and compliance with the various emissions limits. We also built these engines with maximum power and performance to boost your productivity.

To prepare your equipment for Stage V, we added other models to our lineup. KDI engines have always been known for extremely clean combustion. But now with the introduction of our DPF, we're offering one of the most advanced compact aftertreament systems in the world. Through state-of-the-art simulation tools and testing, we created a smart regeneration strategy. A DPF that automatically cleans up in every application, during every duty cycle.

Each combination of KOHLER Flex has been designed in line with the all-in-one philosophy, with the objective of minimizing change for engine installation into existing packages. These efficient and reliable systems can be deployed in many combinations to achieve effective emissions solutions for the different markets.
