

The finishing mower has 3 blades driven by a 2-belts transmission, to achieve perfect grass cutting even on large surfaces. It combines professional effectiveness and cutting quality. Its floating category 0 attachment ensures perfect tillage on uneven ground with the possibility to adjust the cutting height from 2 to 9 cm with the possibility of installing a mulching kit to make a zero residues cut. Particularly used on parks, golf courses, private and municipal gardens.

Standard technical features • Frame in folded and painted steel sheet • Total width 130 cm • 3 rotors with interchangeable blades • Floating attachment to follow the unevenness of the ground • 4 pivoting wheels with shims to adjust the cutting height • Adjustable cut height from 2 to 9 cm.
